01 Public access

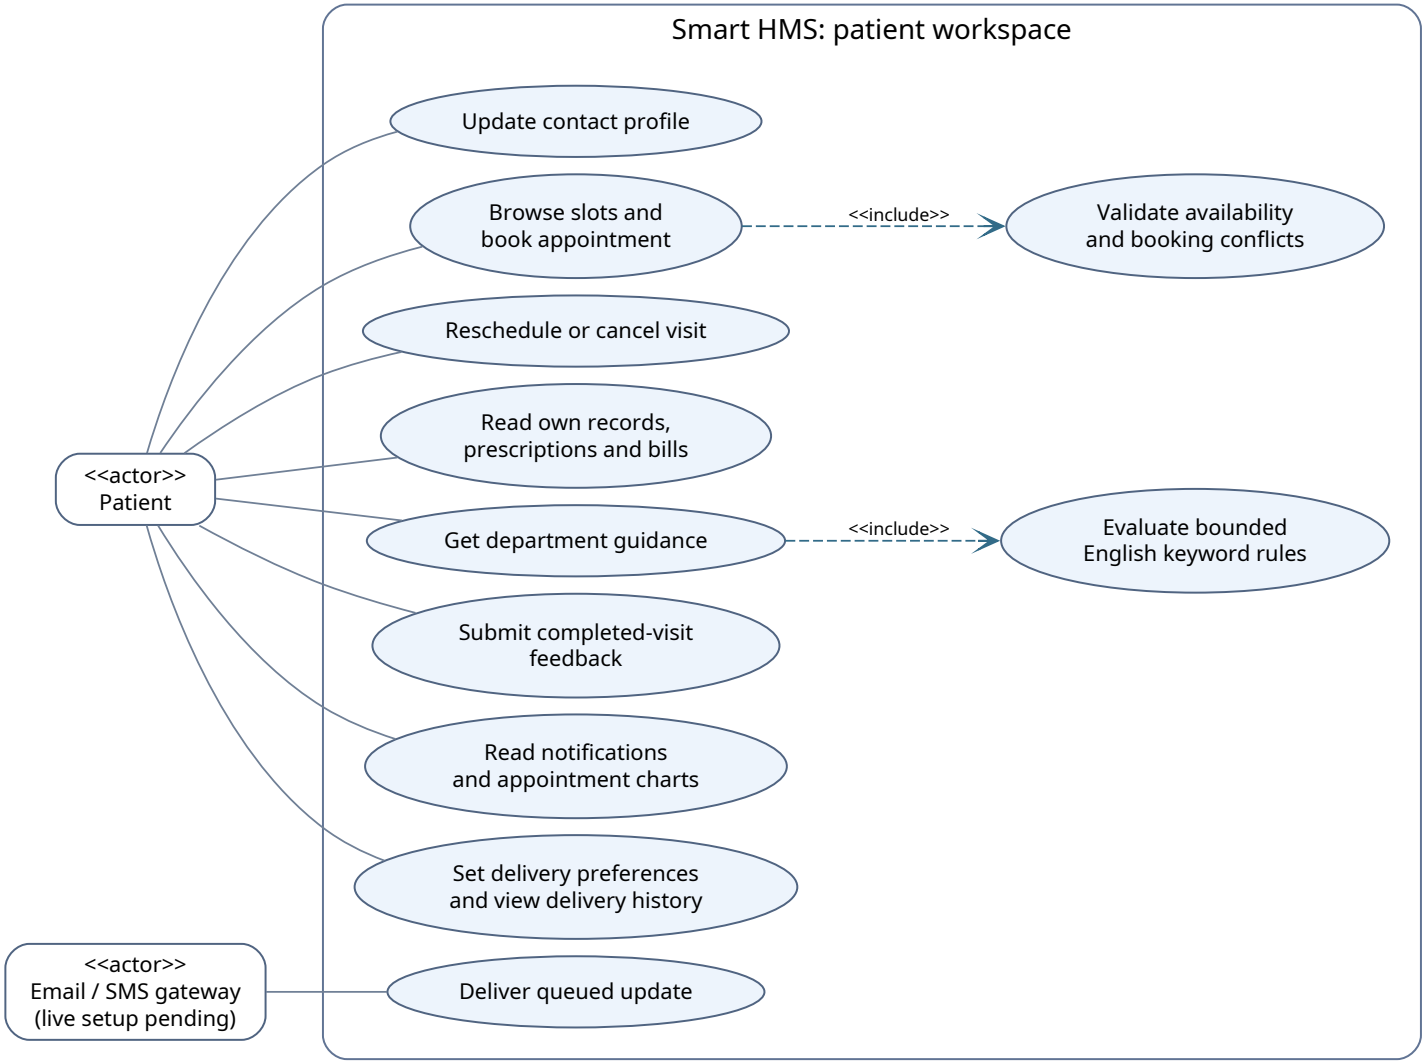

SMART HMS | UML USE CASE VIEW | IMPLEMENTED BEHAVIOUR

Public information requires publication. Registration is patient-only. Recovery links are single-use and expire after 15 minutes; actual SMTP delivery remains pending.

02 Patient workspace

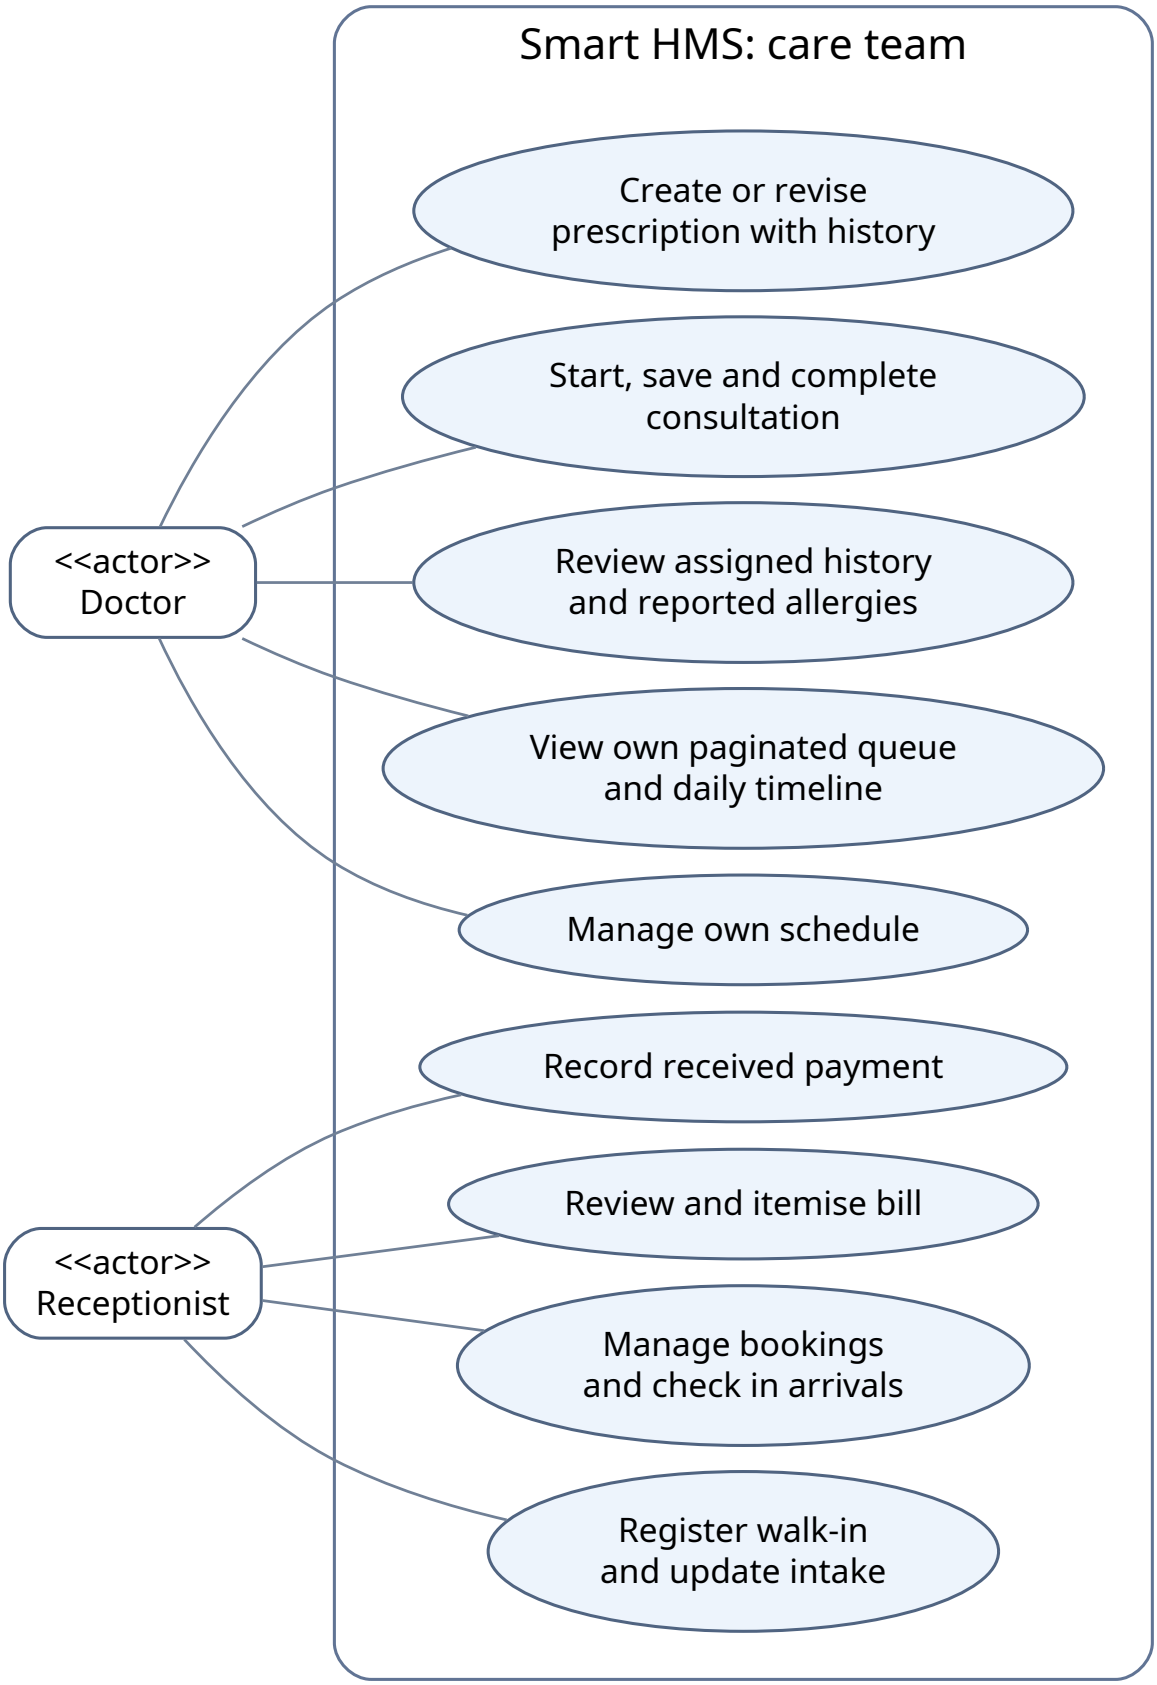

SMART HMS | UML USE CASE VIEW | IMPLEMENTED BEHAVIOUR

Authentication and ownership apply to protected actions. Feedback requires a completed visit. Dashed include arrows identify mandatory internal behaviour. Guidance remains an English keyword prototype, not a diagnosis.

03 Care team

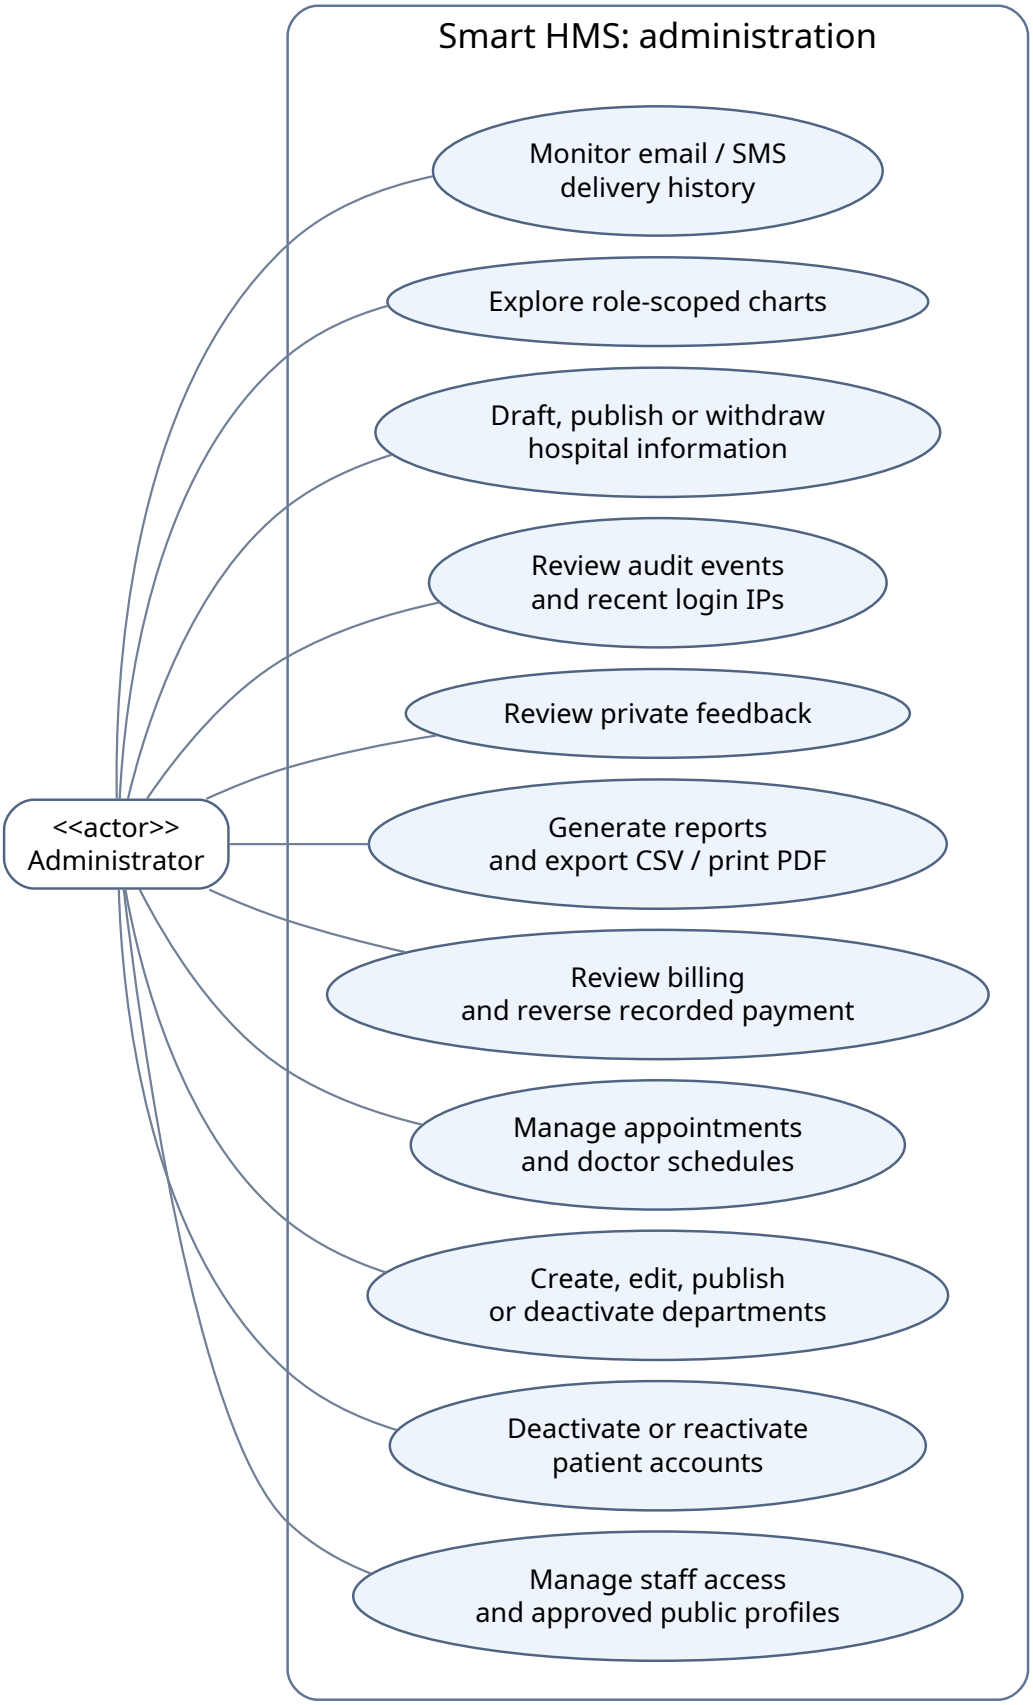

SMART HMS | UML USE CASE VIEW | IMPLEMENTED BEHAVIOUR

Doctors access assigned clinical records. Completion atomically publishes the record, creates the bill and stores notifications. Staff record payments received outside the application; no card payment is processed.

04 Administration

SMART HMS | UML USE CASE VIEW | IMPLEMENTED BEHAVIOUR

Deactivation preserves history and requires open visits to be resolved. Public doctor profiles require explicit approval. Administrative roles do not gain general access to confidential clinical notes.
